B. Reading Comprehension 閱讀測驗

Many people keep some animals as pets. For example, cats, dogs, rabbits, and sea animals. Although these animals have eyes as humans do, some of them can't see certain colors. In other words, they are color-blind.

Dogs' cute faces and their loyalty make people love them. However, they can't see red, orange, and green. These colors always appear yellow or blue to them. A green plant becomes a yellow or blue plant to dogs. For cats, they can see things in blue or green, but things in red appear in different colors to them.

Most sea animals can only see black and white. For example, sharks, whales, and dolphins. As the time goes by, they might lose their color vision because they live under the sea. There is one sea animal which can't see colors. The sea animals are skates. Can you imagine living in a world without any colors?

- (B) 37. Which picture below can be what most sea animals see?

Sometimes when the rain falls hard and fast on you, it might hurt a little. But what happens when it hits a mosquito? A 2012 study says when a raindrop falls on a mosquito, it's like when a bus hits a person. Besides, the little insect is hit by a raindrop about once every 20 seconds. So why don't we see many dead mosquitoes after it rains?

A mosquito is as big as a raindrop, but it is much lighter — 0.002 g only. This saves its life in raindrop attacks. Because the mosquito is so light, when it is hit by a raindrop, it won't experience a force (力量) that is strong enough to kill it.

The study also found that when a mosquito is hit by a raindrop, the insect is pushed by the raindrop and falls together with it. But the mosquito doesn't get wet easily because it is covered with hairs which keep off water. After dropping about 6 cm, it will roll off the raindrop and fly away.

However, this trick isn't always successful. If the mosquito flies too low when it is hit by the raindrop, it won't have time to fly off. Then it will hit the ground and meet its death.
